

Project Scope Spec

Client request

The scope includes two separate tools:

Tool 1: A WhatsApp reply assistant for active conversations. It reads the current thread, understands the context, drafts a reply suggestion in the owner's tone, and leaves the final send action to the owner.

Tool 2: A follow-up outreach writer for old clients. The owner can export a past WhatsApp conversation, upload it into the workspace, and get a copy-ready message for re-engaging that client and trying to win another job.

Client deliverables

Tool 1

- A WhatsApp bot for reviewing incoming customer messages and surfacing reply suggestions.
- A private workspace for editing the assistant's tone and knowledge.
- A reply suggestion drafted from the current WhatsApp conversation.

Tool 2

- A workspace upload flow for exported WhatsApp conversations.
- A copy-ready follow-up outreach suggestion drafted from the uploaded conversation context.

Workflow

Tool 1

1. A customer sends a message in WhatsApp Business.
2. The bot captures the new message and loads the thread context.
3. The assistant uses the configured tone and knowledge from the private workspace to draft one suggested reply.
4. The WhatsApp bot shows the suggested reply drafted by the assistant.
5. The owner reviews and edits the suggestion.
6. The owner sends the final reply manually in WhatsApp Business.

Tool 2

1. The owner exports an older WhatsApp conversation from a past client thread.
2. The owner uploads the exported conversation into the workspace feature.
3. The assistant reads the conversation context and drafts a follow-up outreach message for re-engaging the old client.
4. The owner copies the suggested message and sends it manually to the old client.
